### Featured Publications using RNAscope® Technology

Clinical application of circulating tumor cells in breast cancer.  
 Broersen LH, Van Pelt GW, Tollenaar RA, Mesker WE. (2014). *Cellular Onc.*, 1–7. doi: 10.1371/journal.pone.0054543. PMID: 24249155

Distribution of *LGR5*+ Cells and Associated Implications during the Early Stage of Gastric Tumorigenesis.  
 Jang BG, Lee BL, Kim WH. (2013). *PLoS One*, 8(12):e82390. doi: 10.1371/journal.pone.0082390. PMID: 24340024

Interfollicular Epidermal Stem Cells Self-Renew via Autocrine *Wnt* Signaling.  
 Lim X, Tan SH, Koh WL, Chau RM, Yan KS, Kuo CJ, van Amerongen R, Klein AM, Nusse R (2013). *Science*, 342(6163), 1226–1230. doi: 10.1126/science.1239730. PMID: 24311688

*In situ* validation of an intestinal stem cell signature in colorectal cancer.  
 Ziskin JL, Dunlap D, Yaylaoglu M, Fodor IK, Forrest WF, Patel R, Ge N, Hutchins GG, Pine JK, Quirke P, Koeppen H, Jubb AM (2013). *Gut*, 62(7), 1012–1023. doi: 10.1136/gutjnl-2011-301195. PMID: 22637696

### Stem Cell RNA Biomarkers

Recent stem cell research produced a wealth of discoveries on the identities of stem cells, how they self-renew and differentiate into specialized cells and how they can be reprogrammed *in situ*. Researchers are further studying stem cells in complex tissue environments addressing the following topics:

#### Identification of stem cells and signaling molecules:

Where are the stem cells located and where do their differentiation signals come from? Antibody-based approaches lack the sensitivity required to study secreted protein signals, often present at low concentrations. Although high in sensitivity, extraction-based techniques like PCR destroy the localization information.

**Stem cell functions *in vivo*:** Why do different lineages of stem cells exist and what are their functions in a tissue? What are the roles of these stem cells in processes like wound regeneration?

**Balancing of stem cell signaling:** What controls proliferation over differentiation? How are these different cell fates balanced in the tissue?

**Clinical relevance—connecting stem cells with diseases:** Which stem cell lineages are associated with a certain disease? One area of intense investigation is cancer stem cells.

Multiplexing of several targets in a single assay enables detection of both stem cell markers and signals that they produce. Additionally, RNAscope's single-molecule sensitivity and intact morphological context have proven to be a key tool in these applications.

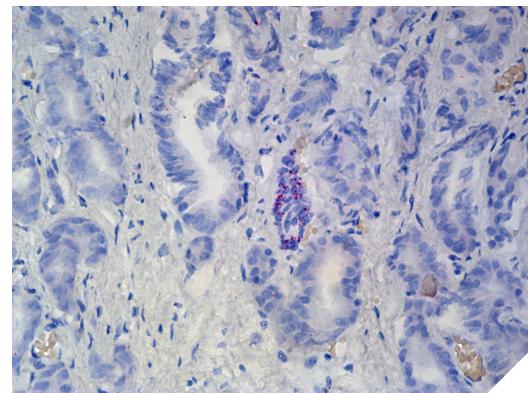

Figure 1. Human prostate: Detection of *TP63* mRNA expression in FFPE tissue with RNAscope® 2.0 HD Red Detection Kit

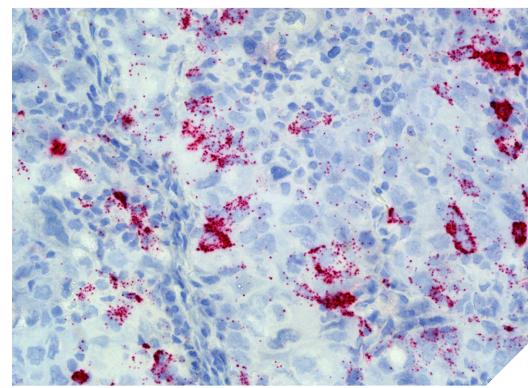

Figure 2: Human lung: Detection of *MMP9* mRNA expression in FFPE tissue with RNAscope® 2.0 HD Red Detection Kit

**MD+MC**

Molecular Detection visualizes what genes are expressed.

Morphological Context localizes where those genes are expressed.
